

Rettelser: ML laves til ML33 LR = LR33 NB samme skal gøres for Outcome B grafer

Rettelser: Walking tool ændres til Wlaking aid HB til Hb Civil status til "living alone" Card (group) til Prescribed cardiac drugs
 AK (group) til Prescribed anticoagulants DM til diabetes cholesterol til Prescribed anticholesterols Sex til Gender

Jeg forstår stadig ikke hvorfor vi skriver der er 10 i teksten når der er 12 individuelle variable? Samme for outcome B

Resp er vidst forkert. Samme ændringer som i outcome B
